## Micro-Power, CMOS Input, RRIO, 1.4V, Push-Pull Output Comparator

---

### GENERAL DESCRIPTION

The SGM8712 is a dual, rail-to-rail input CMOS comparator with typical 300nA ultra-low power supply current per channel. The comparator operates from a wide range of 1.4V to 5.5V supply voltage, and is guaranteed to operate at 1.4V, 2.5V and 5.0V. This feature is suitable for battery-powered applications.

The SGM8712 is optimized for micro-power, single-supply operation. The push-pull output stage supports rail-to-rail output swing and allows for operation with absolute minimum power consumption when driving any capacitive or resistive load.

The SGM8712 is available in a Green MSOP-8 package. The small package makes this device ideal for use in hand-held electronics and mobile phone applications. It is rated over the -40°C to +85°C temperature range.

**OVERSTRESS CAUTION**

Stresses beyond those listed in Absolute Maximum Ratings may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect reliability. Functional operation of the device at any conditions beyond those indicated in the Recommended Operating Conditions section is not implied.

**ESD SENSITIVITY CAUTION**

This integrated circuit can be damaged by ESD if you don't pay attention to ESD protection. SGMICRO recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures

can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.
