

### GENERAL DESCRIPTION

The SGM4594 is a general-purpose parallel input and output (I/O) expander device, which consists of two lanes and 8 bits parallel I/O expansion. The device communicates with processor through two-line bidirectional I<sup>2</sup>C bus (or SMBus), supporting I<sup>2</sup>C standard mode (100kHz) and I<sup>2</sup>C fast mode (400kHz) clock frequency. The SGM4594 provides a simple solution for the devices that need additional I/Os, such as LEDs, buttons, sensors, etc.

The SGM4594 can select device address by the A0, A1 and A2 pins. The SGM4594 features an interrupt generated on the nINT pin whenever the state of input port changes. An output anomaly may also be indicated by the nINT pin when the corresponding Output Anomaly Indication port register is set to 1 and the device is in push-pull output mode. The SGM4594 can cycle the power supply and cause a power-on reset to reset itself to the default state.

The SGM4594 is available in Green TSSOP-24 and TQFN-4x4-24FL packages and supports -40 °C to +125°C temperature range.

**ESD SENSITIVITY CAUTION**

This integrated circuit can be damaged if ESD protections are not considered carefully. SGMICRO recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because even small parametric changes could cause the device not to meet the published specifications.

**OVERSTRESS CAUTION**

Stresses beyond those listed in Absolute Maximum Ratings may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect reliability. Functional operation of the device at any conditions beyond those indicated in the Recommended Operating Conditions section is not implied.
