

SGM8041

710nA, Single Rail-to-Rail I/O Operational Amplifier

GENERAL DESCRIPTION

The SGM8041 is a single, high precision operational amplifier which can operate from 1.4V to 5.5V single supply, while consuming only 710nA quiescent current. It provides rail-to-rail input and output operation. Therefore, the SGM8041 is suitable for use in portable instrumentation and battery-powered systems.

The SGM8041 is unity-gain stable, and features a 14.5kHz gain-bandwidth product. It is designed to provide optimal performance in low frequency systems, when monitoring battery current and conditioning sensor signal.

The SGM8041 is available in Green SOT-23-5, SOIC-8 and MSOP-8 packages. It operates over an ambient temperature range of -40°C to +85°C.

OVERSTRESS CAUTION

Stresses beyond those listed in Absolute Maximum Ratings may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect reliability. Functional operation of the device at any

conditions beyond those indicated in the Recommended Operating Conditions section is not implied.

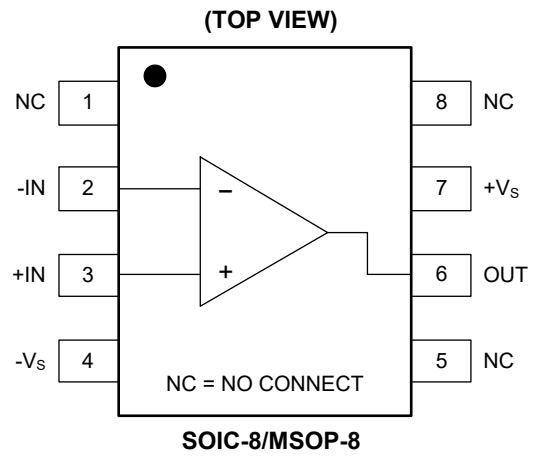

ESD SENSITIVITY CAUTION

This integrated circuit can be damaged if ESD protections are not considered carefully. SGMICRO recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because even small parametric changes could cause the device not to meet the published specifications.
